PHARMAGLOBALENG

Tablet tooling assessment checklist

For sticking, picking and surface-finishing inquiries. Use this sheet to organize an initial discussion; it is not a repair procedure or a release-to-production record.

1. Identify the request

Name / company: _____
Work email / phone: _____
Press model / tooling identification: _____
Requested timing / delivery country: _____

2. Describe the observed problem

Record where material builds up: broad punch face, lettering, numbers or another area. Note whether one tool or several are affected, when the problem starts, and what has already been tried.

Observations: _____
_____

3. Collect approved supporting evidence

Pair a photograph of the affected tablet with the corresponding punch detail. Include the tooling reference and station where known. Add available coating, cleaning and service history. Share only information your organization authorizes; unknown details may be left unconfirmed.

4. Define the service question

Are you asking about controlled polishing, restoration, engraving review or coating evaluation? Note critical features and available acceptance criteria. A surface treatment must suit the tooling condition and application; a photograph alone cannot confirm repairability.

5. Agree the next step

Send the outline to info@pharmaglobaleng.com or call +1 (732) 439-7849. Scope, pricing, timing and any inspection or trial requirements must be agreed. Contact us before shipping tooling, samples or product-contact materials.
